

Paola Ammendola is researcher at the Institute for Sciences and Technologies for Sustainable Energy and Mobility (STEMS) - CNR. She received the Degree (2003) and PhD (2006) in Chemical Engineering at University Federico II of Napoli (IT). Post-doc fellowship at the CNR-IRC (2006-2010). Permanent position as researcher at the CNR-IRC since 2010. She has been involved in different national research projects (FISR, PON, MSE/CNR) and research agreements (Riello, ENI, CSM) from 2006-2013. She has been the scientific coordinator for IRC in the framework of the FP-7 project STAGE-STE (2014-2018) with reference to the topic of solar energy storage in fluidized beds. She is the scientific responsible for IRC of the H2020 project SOCRATCES (2018-2020) with reference to the topic of thermochemical energy storage for Concentrated Solar Power (CSP) applications. She is member of the scientific board of the Italian MIUR for the evaluation of national research projects (PRIN, SIR) since 2013. She is member of the reviewers board of CNR for the evaluation of research projects financed by Italian MiSE. She is inventor of 4 patents. She took the National Scientific Qualifications (ASN) as Associate Professor in Chemical Engineering (2017) and Full Professor in Chemical Engineering (2018). Her main research interests are the sound-assisted fluidization of cohesive powders, the use of fluidized bed reactors in processes for clean energy production and the set-up of innovative catalytic systems for energy (hydrogen production and biomass tar conversion). Her recent research activity is focused on the CO₂ capture process based on the CO₂ adsorption on solid materials and the development of innovative reactor configurations for solar energy storage/exchange.
