

Dr. Elena Badetti holds a Ph.D. in chemistry, with European Mention, at Universidad Autónoma de Barcelona, Spain (2008). From 2008 to 2010 she had a postdoctoral research contract at the Department of Molecular Nanoscience and Organic Materials of ICMAB-CSIC of Barcelona and from 2012 to 2016 she was postdoctoral researcher at the University of Padova (Italy), at the Department of Chemical Sciences. She acquired experience in organic synthesis, catalysis, coordination and supramolecular chemistry as well as in synthesis, functionalization and characterization of (macro)molecules and nanomaterials. Since 2016 she is a senior research scientist at the Department of Environmental Sciences, Informatics and Statistics (DAIS) at Ca' Foscari University of Venice. She is currently involved within several EU H2020 projects (BIORIMA, RiskGONE, and SUNSHINE) to support the development of methods for the environmental exposure assessment of engineered nanomaterials used in commercial products and to support the development of Safe by Design strategies. She is also involved in an ANR project (Starch4Sapiens) for the extraction and physical-chemical characterization of modern and ancient starch grains trapped in dental calculus and grinding stones. She is co-author of 47 papers published by international peer reviewed journals.
